

# WDT-3500

## Walk-Around Down Draft Tables

### Standard Features

- Exceptional 385 FPM Deck Velocity
- Captures 99.95% down to 1/2 micron
- Automatic Reverse Pulse Filter Cleaning
- 5" Heavy Duty Casters
- Solid Welded, Heavy Gauge Construction
- Fiberglass Grated Work Deck
- Integral Direct Drive Motor & Exhaust Fan
- Auto Pulse and NEMA 12 Motor Controls
- Single Door Entry to Filters & Dust Drawer

### Optional Features

- Paint Color
- Work Deck Material
- Filter Media

### Applications

- Hand Articulated Dust Producing Operations

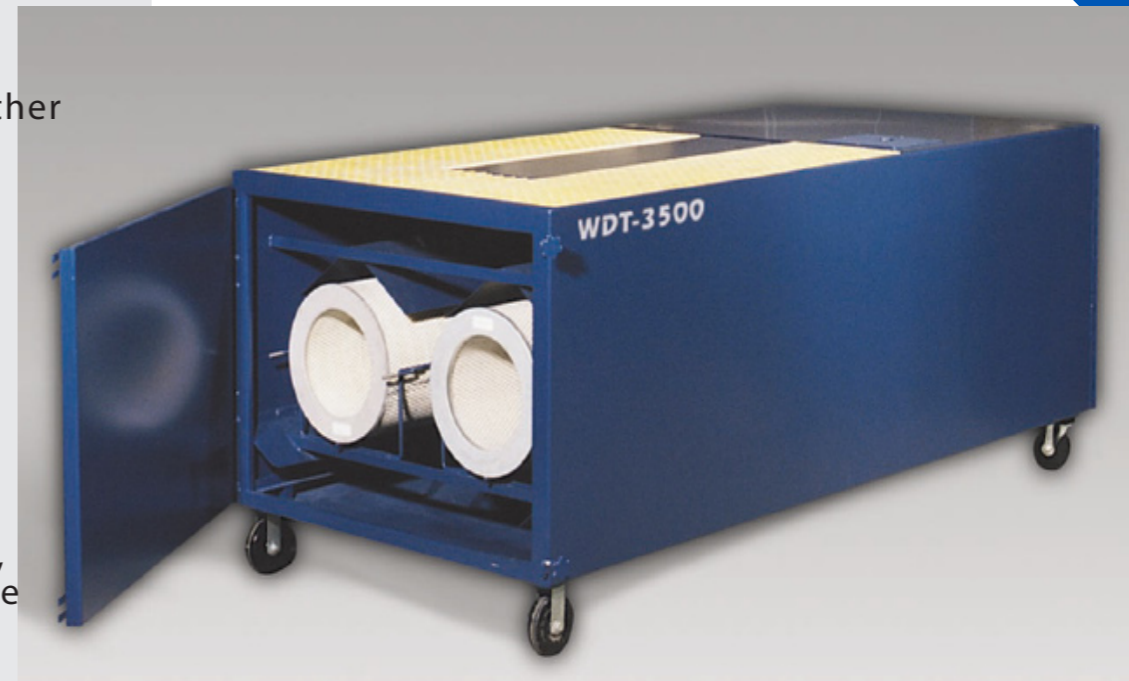

The WDT-3500 features a walk-around work bench area and is ideal for use in sanding, grinding, or other hand-held finishing operation where the product needs to be serviced around it's entire perimeter.

This unique system is fully portable and does not require hard-piping to larger systems.

Equipped with heavy-duty, industrial locking casters, the WDT-3500 is easily relocated or repositioned from one work area to another allowing for a completely versatile operation.

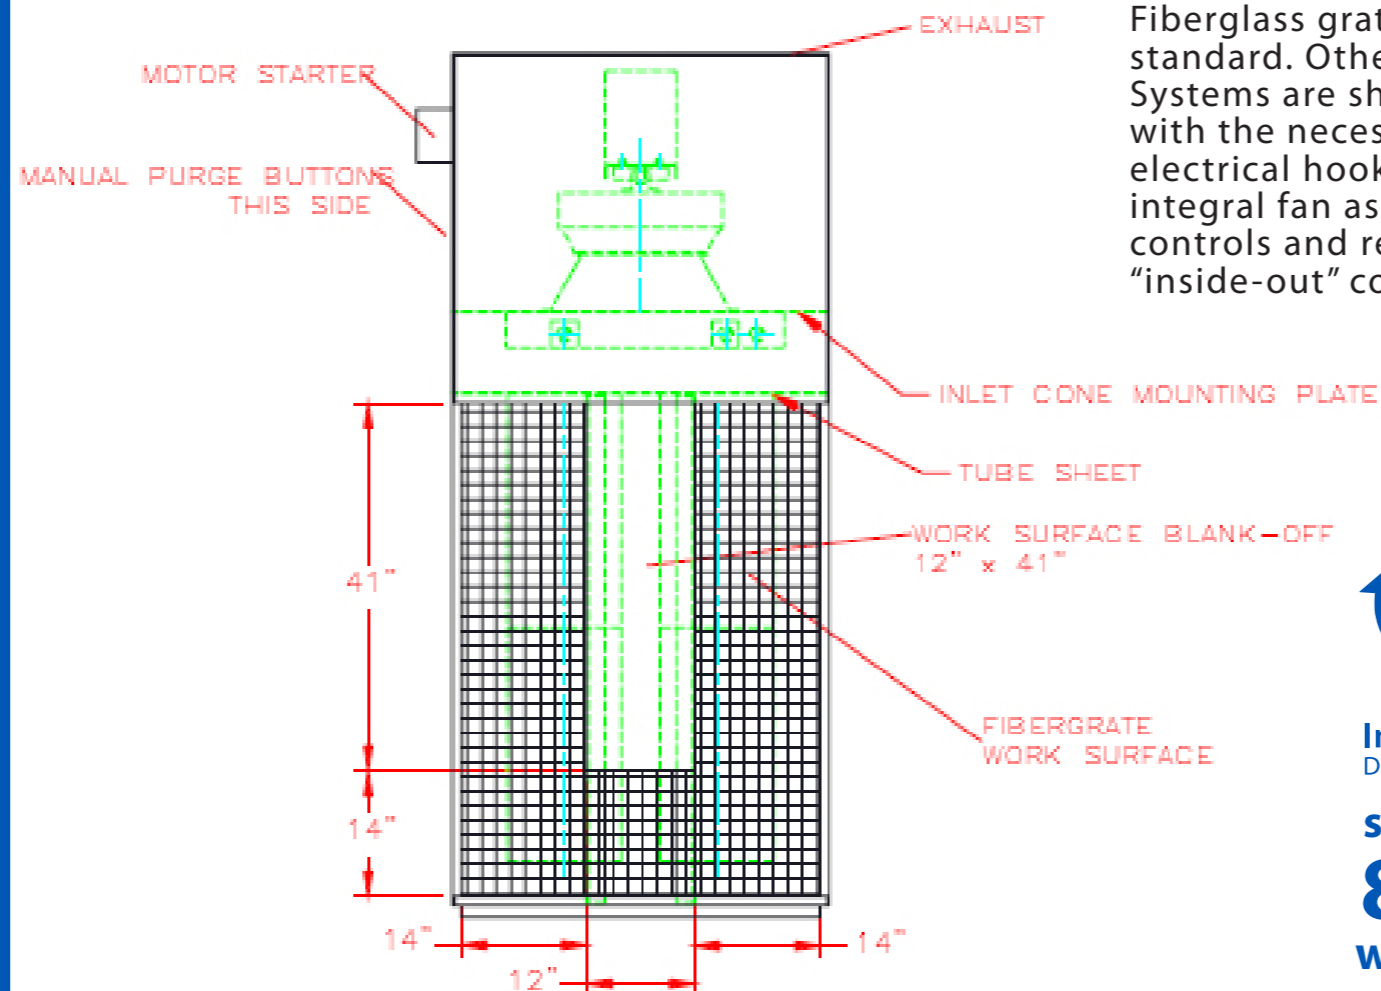

At 3,500 CFM and a 385 FPM average face velocity, the WDT-3500 offers the highest work deck capture velocity available on this type of work station and will efficiently pull contaminants away from the product and the breathing zone of the worker.

The dust collection system is equipped with four (4) 252 square foot polyester/cellulose blend cartridge media filters mounted in a horizontal position directly under the work deck.

The cartridges are protected from exposure to debris by a unique triangular diffuser shield mounted above the media which encourages dust to fall into the collection drawer.

Fiberglass grated work surfaces are provided as standard. Other surface materials are available. Systems are shipped fully assembled and equipped with the necessary components required for electrical hook-up. Standard systems include an integral fan assembly, 3 HP TEFC motor, motor controls and reverse pulse controls for automatic "inside-out" compressed air filter cleaning.
