

Large Particulate Drop Out Box

- Self Contained
- No Moving Parts
- Solid Welded Steel
- Easy Installation
- Increases Filter Longevity
- Replaceable Stainless Steel Inlet Deflection Plate
- Great for New or Existing Dust Collection Systems
- Low Pressure Consumption (1" - 2" wg)

DuraBox Drop Out Box

The DuraBox DBX Series Dropbox works inline with your ductwork to remove larger particulate from the air stream. Upon entering the DuraBox, the air stream slows as it encounters a deflector plate. The larger particles drop into the hopper and collection bin and only the smaller dust particles are allowed to continue through the duct work into the dust collector. This decreases the load on the filters of the primary dust collector and, in-turn, increases longevity. The ProVent DuraBox DBX is popular due to its ease of installation, material reclamation, and ability to be added to existing dust collection systems.
